Software Test Engineer - Vancouver CA

Snipp is a global loyalty and promotions company with a singular focus: to develop disruptive engagement platforms that generate insights and drive sales. Our solutions include shopper marketing promotions, loyalty, rewards, rebates and data analytics, all of which are seamlessly integrated to provide a one-stop marketing technology platform. We are the market leader for receipt-based purchase validation and we are the only unified loyalty solution in the market for CPG brands. We work with hundreds of programs for Fortune 1000 brands and world-class agencies and partners, providing creative solutions to solve their needs.

We're looking for smart, entrepreneurial people who enjoy challenges and working on cutting edge technology – no one will be holding your hand here. In exchange, we promise to pay you fairly, give you flexibility in how/ where you work, present you with lots of challenges so you will never be bored and oh yeah, give you real stock options in a public company (so they're actually worth something already).

We are looking for a talented and passionate software test engineer who cares about creating quality products to join our team. As a software test engineer on the team, you will be working with our developers to improve and ensure the quality of our software and improving quality and efficiency of the QA process. This involves manual as well as automated testing on both our existing product, and all new feature releases. We believe that software development should be fun, enjoyable and productive. At Snipp, we work smart, we work hard, and we have fun.

Job Description:

- Use your critical thinking and creativity to help design, implement and deploy our software platform globally
- Work in an agile environment helping to ensure that our products is of a high quality by performing QA activities such as functional, regression and automated testing
- Log defects with clear reproduction steps and detail defect artifacts in defect tracking system
- Coordinate and participate in feature requirements review for testability, including writing and review of automation and manual test plans
- To work on a cutting-edge stack and build a next generation of a product that is used by Fortune 1000 brands.
- To collaborate with our group of talented, passionate and fun developers to assist in debugging and testing and development of tools to help identify bugs
- To have a customer first mentality and help troubleshoot critical customer issues including reproducing and logging issues in a clear and concise format.

Requirements

- Bachelor's degree in Computer Science, Computer Engineering or similar technical field
- 2+ years of experience as a Software Test Developer
- A good understanding of different software testing techniques and when to apply them
- Great attention to detail, quick learning skill and high problem-solving ability are a must
- Self-starter with excellent communication, collaboration, and analytical skills
- HTML, CSS, JavaScript or C# development skills is a plus
- Experience with using Selenium and REST API test framework is a plus
- Be able to write user case, test plan for different type of software applications
