

System Administrator – Intermediate (Mumbai)

Snipp is a fast-growing publicly listed company focused on building promotions, loyalty and shopper marketing technology solutions for brands. We work with some of the largest brands and agencies in North America and increasingly internationally and produce cutting-edge campaigns for them.

We're looking for smart, entrepreneurial people who enjoy challenges and working on cutting edge technology – no one will be holding your hand here. In exchange, we promise to pay you fairly, give you flexibility in how/where you work, present you with lots of challenges so you will never be bored and oh yeah, give you real stock options in a public company (so they're actually worth something already).

We're looking for an experienced System Administrator to join our Snippcheck team in Mumbai Office. This is a fast-paced and challenging environment with excellent growth opportunities. In this position, you'll be maintaining, upgrading, and managing our software and networks in the cloud-based environment. We work smart, we work hard, and we are having fun.

Key Technical Requirements:

- Minimum 2 years' proven experience as a System Administrator with
 - IIS deployment and configuration
 - Database (MS SQL) set up and configuration
 - Network and Firewall configuration
- In-depth experience with AWS services and technologies are required
- Knowledge of system security and data backup/recovery
- Familiarity with various operating systems and platforms, e.g. Windows and Linux
- Knowledge/experience of basic networking including VPNs (specifically host to host VPNs)
- Knowledge/experience of basic SSL/TLS setup, management, troubleshooting, and the ability to recognize problems with a SSL/TLS system
- Ability to respond to escalations or help desk requests after hours on a limited basis
- Excellent problem-solving and critical thinking skills
- Excellent written and verbal communication skills

Bonus Qualifications:

- Experience with Sophos UTM
- Experience with Jira
- Experience with New Relic and Nagios

Position Responsibility:

- Administrate infrastructure, including firewalls, databases, malware protection software and other processes
- Execute performance tuning, monitoring, patching and other system administration tasks to support high availability AWS infrastructure
- Deploy, install and configure software releases
- Ensure security through access controls, backups and firewalls
- Set up accounts, servers and workstations
- Troubleshoot issues and outages
